

【 Build a solid foundation in math learning ! 】

Abacus, the traditional Chinese “calculator”, has been an effective tool to teach entry-level math to children. Through the structure of beads, children built a clear concept about place value. The challenging concept of re-grouping in addition and subtraction becomes easier with the help of visual aids of Abacus beads. Multiplication and division come naturally after they master the speed.

In this beginning class, the teacher will first introduce how to use the abacus. Then gradually introduce one or two basic rules in addition or subtraction every week. Homework assignment is important for students to get familiar with the rules and build up speed. After the initial period, the teacher will custom the learning speed to each child according to their progress.

Suitable age: 5 years or older, first time learner.
